ABOUT ME

I'm Jorge — a 27-year-old software engineer. I'm currently a Software Engineer focused on backend and AI at Apple. I'm based in Madrid, Spain, and previously spent around 5 years working in Seoul, South Korea.

I design and build production systems end to end, from architecture through delivery, with backend services and infrastructure at the center. Over more than 7 years that has included distributed systems, data pipelines, Kubernetes and cloud platforms, and AI in production: internal AI agents and MCP tooling, knowledge bases and retrieval systems (RAG) sold to thousands of companies in South Korea, generative AI systems, and an LLM chatbot.

Feel free to send me an email at **jorge@gimenezp.dev** if you want to know more about me, my experience or talk about some interesting project!

SKILLS

Backend & messaging: gRPC, Kafka, RabbitMQ, NATS, WebSockets, Node.js

Cloud & infra: AWS (incl. serverless), Azure, Docker, Kubernetes, Terraform

Data: PostgreSQL, SQL, MongoDB, Apache Iceberg, ETL/data pipelines, vector databases

AI systems: RAG / retrieval systems, knowledge bases, AI agents, MCP, LLM applications

Languages: Python, TypeScript, Go, Rust, C/C++

Frontend: React, Next.js, Svelte/SvelteKit, Three.js

WORK EXPERIENCE

Software Engineer at Apple

from November 2025 to present in Madrid, Spain

Architected data analysis applications and high-throughput distributed data pipelines for executive decision-making on large-scale datasets. Designed and deployed internal AI agents and MCP tooling into cross-team operational workflows. Improved the software infrastructure behind those systems, and with it the processing efficiency and performance of core applications.

Python | TypeScript | Go (Golang) | Rust | MCP | SvelteKit | Docker | Kubernetes | PostgreSQL

Senior Fullstack Software Engineer - Generative AI Team at PwC

from September 2023 to November 2025 in Seoul, South Korea

On the Generative AI team in Seoul, mostly designed and built production knowledge bases and retrieval systems (RAG). These products were, and still are, sold to thousands of companies in South Korea. Delivered them with Python, TypeScript, Go, and C/C++, React and Svelte/SvelteKit, gRPC, RabbitMQ, and NATS, and PostgreSQL on Azure. Containerized services with Docker and deployed the images to Kubernetes.

Python | TypeScript | Go (Golang) | C/C++ | gRPC | React | Svelte | SvelteKit | RabbitMQ | NATS | Azure | Docker | Kubernetes | PostgreSQL

Cloud Native Developer at Hospital Clínic de Barcelona

from September 2020 to November 2025 in Barcelona, Spain (+Remote)

Led design and delivery of clinical applications used by hundreds of medical professionals, including the database models behind them. Architected secure backends for sensitive patient data, with custom encryption, anonymization, and authentication protocols.

Python | Go (Golang) | React | Svelte | Next.js | SvelteKit | Kafka | Apache Iceberg | Terraform | AWS

3D Web Apps Engineer & Backend Engineer at Funnyworks

from April 2023 to September 2023 in Seoul, South Korea

Designed and deployed Web3 integrations, WebGL interfaces, and multiplayer game systems for high-traffic corporate partnerships. Architected and deployed a production LLM chatbot on Discord for a large-scale user community.

TypeScript | Go (Golang) | React | Three.js | React Three Fiber (R3F) | AWS

Fullstack Engineer & Engineering Team Leader at Onoma AI

from April 2022 to April 2023 in Seoul, South Korea

Directed an engineering team to architect and scale AI-powered design tools on serverless infrastructure and generative models. Designed the system architecture, integrated vector databases, and deployed the API pipelines those AI services ran on.

TypeScript | Go (Golang) | gRPC | Next.js | React | SQL | AWS

Fullstack Software Engineer at ASDT Systems EU

from January 2020 to January 2023 in Manresa, Spain (+Remote)

Architected and deployed a highly scalable, real-time drone detection and neutralization web platform utilizing optimized data models and WebSocket servers. Engineered the transition from legacy applications to web-based architectures, facilitating adoption by enterprise and government clients.

TypeScript | Node.js | React | MongoDB | Go (Golang)

R&D Solutions Engineer at The Forest Next

from January 2019 to January 2020 in Terrassa, Spain

Developed and deployed machine learning models for anomaly detection and predictive maintenance in automotive production lines. Programmed collaborative robotics (Universal Robots) and built a mobile workforce management application.

Python | Matlab | Flutter | SQL

Junior Data Analyst at PocketBI Cloud

from January 2018 to January 2019 in Barcelona, Spain

Built enterprise data visualization dashboards leveraging Tableau, Qlik, and PowerBI for multinational clients. Engineered custom Python scripts and ETL pipelines to extract, transform, and aggregate data from diverse SQL, NoSQL, and raw data sources.

SQL | Python | PowerBI | Tableau

ACADEMIC BACKGROUND

Exchange Student, Bachelor's in Computer Science

2021 - 2022 • 고려대학교 (Korea University) • Seoul, South Korea

- 2 semesters as an exchange student.
- Focus on AI for Natural Language Processing, Machine Learning applied to Graphs and 3D Graphics.

Bachelor's Degree in Computer Engineering

2018 - 2021 • Universitat Autònoma de Barcelona • Bellaterra, Spain

- 240 ECTS credits (4-year program).
- Specialization: Computing.
- Focus on Algorithms, performance optimization, Operating Systems, Computer Architecture, AI and scientific computation.
- Final Project: Developed a Neural Hash system to detect manipulated images.

LANGUAGE SKILLS

Spanish
Native Speaker

English
Advanced IELTS 8.0 = C1

Korean
Upper Intermediate
